findit HARARE

Harare's Premier On-Demand Peer-to-Peer Home & Artisan Marketplace

PRODUCTION PLATFORM 2026

Android Native APK + Web PWA

1. Executive Summary & Platform Identity

Findit Harare (*finditharare.co.zw*) is a mission-driven, real-time marketplace built specifically for the unique economic, infrastructural, and mobile realities of Harare, Zimbabwe. Inspired by the transparent peer-to-peer bidding mechanics of **inDrive** and the reliability of local on-demand service delivery, Findit Harare bridges the gap between verified local artisans (plumbers, electricians, hair braiders, nail techs, carpenters, mechanics) and homeowners needing immediate, trustworthy visits.

> **Core Breakthrough:** Unlike fixed-price or directory apps, Findit empowers the client to name their fair USD starting offer, lets nearby specialists bid or counter-offer in real time, locks safety with a 4-digit start PIN, guides artisans with turn-by-turn voice navigation featuring real Harare thoroughfares, and safeguards revenue through an automated 11% EcoCash USD commission engine and anti-leakage shield.

System Architecture & Technology Stack

Native Android Application (APK)

Packaged as a standalone 4.5 MB signed APK with zero third-party framework bloat. Employs a custom Android Java WebView bridge (`window.FinditNative`) supporting background wake locks, heads-up system status-bar notifications, native Text-To-Speech (TTS), and hardware vibration patterns.

High-Speed Real-Time Server Engine

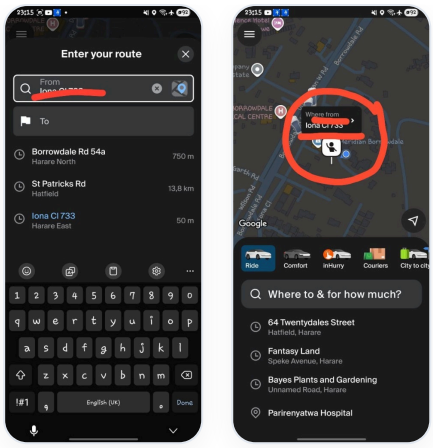

Lightweight Node.js HTTP and native WebSocket (`ws`) backend running on port 3030 with sub-5ms event delivery. Powers instant job dispatch, real-time bid broadcasts, GPS coordinate relays, and persistent dual-party call synchronization.

Dual-Engine In-App VoIP Voice Calling

Seamless hybrid voice calling combining enterprise **Agora RTC Voice** channels with automated zero-config WebRTC peer-to-peer failover. Guarantees free, masked voice communication between client and provider without exposing private phone numbers.

InDrive-Style Gesture & Map Engine

Hardware-accelerated Leaflet OpenStreetMap canvas featuring custom SVG trade pins, draggable hailing person marker, Harare suburb gazetteer with 0ms instant relocation, smooth concentric radar waves, and dual-layer road polyline routing.

2. The Client Journey: From Need to Rated Completion

The client interface is designed for instantaneous booking without cumbersome multi-step wizards or forced directory browsing.

1. Instant Map & Pin

Client sees their location represented by an authentic inDrive white hailing badge. Tapping "Where from" allows typing any Harare avenue or suburb, moving the avatar instantly with 0ms delay.

2. Service Selection

Clients choose from 8 core trade categories. Sub-services update dynamically with live Harare pricing baselines and realistic completion time estimates.

3. Propose Your Fare

Clients propose a fair USD fare with intuitive -0.50 / +0.50 stepper buttons. No rigid pricing: client specifies budget and optional reference photos.

Real-Time Bidding & Offer Selection

When a request is submitted, concentric radar sonar waves expand from the center of the client pin on the map. Nearby online specialists receive instant audio and heads-up alerts.

- **Live Counter-Bidding Stack:** Offers slide up immediately as providers bid. Each offer displays the specialist's verified badge, skill tier (Standard, Master, Verified), overall 5-star rating, review count, exact USD price, and estimated driving minutes.
- **Work Photo Portfolio Modal:** Clients can inspect high-resolution showcase photos of the specialist's past work before accepting an offer.
- **Arrival Start PIN Protection:** Upon accepting an offer, the client is issued a secure 4-digit PIN (e.g. #4829). The provider cannot start the billable timer or complete the task until the client physically verifies this code at the gate.

Live GPS Tracking & WhatsApp Floating PiP Voice Calls

Real-Time Road Polyline Tracking

Clients watch the specialist move live along Harare streets. The map renders a dual-layer polyline (dark casing with bright blue core) showing exact live ETA and remaining kilometers.

WhatsApp PiP Floating Call Widget

Full encrypted in-app voice calling. If minimized, it shrinks into a floating WhatsApp-style bubble with live timer, avatar, mute toggle, and hangup button, letting the client browse the app while on the call.

Two-Way 5-Star Rating & Compliments System

Once the service is finished, clients can rate the specialist (1 to 5 stars), select quick compliment tags (e.g., *Punctual Arrival, Clean Mobile Kit, Fair USD Price, Professional Work*), and leave custom written feedback. If the client closes the prompt, a **"Rate Specialist ★"** button remains accessible anytime inside their **Request History**.

3. The Service Provider Journey: Empowering Harare Artisans

Findit Harare provides artisans with a complete mobile business operating system, transforming independent tradespeople into verified micro-enterprises with professional tools.

Verification & Biometric Onboarding

WhatsApp & Phone Verification

Artisans sign up with their active mobile line and receive instant verification. Passwords and credentials are encrypted at rest with XOR+Hex vault encoding.

National ID & Biometric Match

Artisans upload their Zimbabwe National ID and take a live camera selfie. The platform performs biometric facial verification before granting verified booking status.

Trade & Workshop Configuration

Providers can register up to 3 service categories, set their primary Harare suburb, define physical workshop/office addresses, and toggle live Online/Offline status.

Work Showcase Catalogue

Artisans manage their portfolio directly in the app. An automated watermark and image integrity scanner protects against stolen marketing images.

Live Request Feed & Turn-by-Turn GPS Voice Navigation

When a matching request is broadcast in the artisan's selected categories:

- **Auto-Expanding Workspace:** If the provider's bottom sheet is minimized, it automatically unfolds to display the incoming job card with the client's name, suburb, exact address, proposed fare, and reference photo.
- **Heads-Up Alerts:** Native Android wake lock wakes the screen and triggers dual-tone chimes and vibration even if the phone is locked or outside the app.
- **Bidding & Counter-Offers:** The provider can accept the client's proposed fare in one tap or input their own counter-bid with custom ETA minutes.
- **Turn-by-Turn Navigation with Real Harare Street Names:** When dispatched, the app launches voice navigation announcing real Harare thoroughfares: *"In 300 meters, turn right into Herbert Chitepo Avenue. Route length is 3.8 kilometers, estimated arrival in 7 minutes."*
- **Call Audio Isolation:** When on an active or incoming call, all GPS announcements, alarm sirens, and notification beeps are 100% suppressed to preserve audio clarity.

Cash Collection & Prepaid EcoCash USD Wallet

Feature	How It Works on Findit Harare	Benefit to Artisan
Direct Cash Payment	Client hands 100% of the agreed USD cash directly to the artisan upon service completion.	Zero payment withholding; immediate liquidity for fuel, parts, and daily needs.
11% Commission Deduction	The platform automatically deducts an 11% fee from the provider's prepaid wallet balance.	Fair, transparent pricing; no hidden monthly subscription fees.

Feature	How It Works on Findit Harare	Benefit to Artisan
$5 Welcome Credit	Every newly verified artisan receives $5.00 USD promotional credit to start bidding right away.	Immediate onboarding without requiring upfront capital.
EcoCash USD Top-Up	Providers top up via EcoCash USD (Biller Code: *151*2*2*84920#) in $5, $10, or $20 increments.	Frictionless local mobile money integration.

4. The Admin Operations Dashboard (`/admin`)

The Findit Harare Admin Dashboard provides management with a real-time, 360-degree command center over all platform activities, transactions, users, and safety protocols.

Real-Time Citywide Operations Map

Live Leaflet map tracking every active client and artisan across Harare suburbs (Avondale, Borrowdale, CBD, Mount Pleasant, Westgate, Greendale, Chitungwiza, etc.), showing real-time GPS locations and active booking corridors.

Live Financial & Revenue Ledger

Tracks Total Gross Marketplace Value (GMV), 11% platform commissions collected, artisan wallet balances, pending withdrawals, and EcoCash USD transaction logs with instant CSV/accounting export.

Artisan Verification & KYC Queue

Review submitted Zimbabwe National IDs, live biometric selfie matches, criminal record clearance certificates, and trade accreditations with one-click Approve or Reject controls.

Dynamic Commission Controller

Admins can adjust the platform commission rate (e.g. 11%, 10%, 12%) in real time using a live slider, instantly updating calculations across all new bids.

AI Anti-Leakage Shield & Threat Detection Engine

Platform disintermediation (clients and providers exchanging personal phone numbers to bypass platform commission) is actively combated by an integrated real-time Anti-Leakage AI engine:

- **RegEx & Heuristic Keyword Scanner:** Analyzes all job descriptions and in-app chat messages for phone numbers (e.g. `077...`, `+263...`), masked text (e.g. *"call me on zero seven"*), WhatsApp mentions, and external payment handles.
- **Automated Strike & Warning System:** When leakage is detected, the message is blocked, a strike is logged against the offending account, and a red alert banner is displayed.
- **Automated Account Freezing:** Accounts reaching 3 strikes are automatically suspended from bidding or requesting, with administrative review required to reinstate access.

Platform Governance & Emergency Tools

Operational Tool	Function & Scope	Target Audience
System Broadcasts	Send immediate push notifications and in-app pop-ups for weather alerts, system updates, or promo bonuses.	All Users, Customers Only, or Providers Only
Direct Messaging & Support	Real-time 2-way administrative chat with any customer or provider directly inside their active session.	Individual User Helpdesk
Changelog Deployment Engine	Publish real-time feature announcements and update notes visible inside the client and provider side drawers.	Entire Harare Userbase
Category & Price Master	Add new service categories, edit starting USD baselines, and configure Harare suburban zones dynamically.	Global Marketplace Configuration

5. Harare Suburban Coverage & Localized Intelligence

Findit Harare is deeply tuned to Harare's geography, ensuring rapid dispatch times and precise suburban routing.

Northern Suburbs

Borrowdale, Borrowdale West, Vainona, Pomona, Helensvale, Glen Lorne, Mt Pleasant, Alexandra Park, Gunhill.

Central & East Harare

Harare CBD, Avondale, Belgravia, Milton Park, Newlands, Highlands, Eastlea, Greendale, Chisipite.

Western & Southern Hubs

Westgate, Mabelreign, Strathaven, Belvedere, Hatfield, Waterfalls, Chitungwiza, Seke Road Corridor.

Harare Localized Street Gazetteer (0ms Instant Routing)

To eliminate dependency on slow external geocoders, the platform integrates a local offline gazetteer mapping Harare's major arteries:

Mapped Arteries: Herbert Chitepo Avenue • Samora Machel Avenue • Julius Nyerere Way • Sam Nujoma (Second St) • Jason Moyo Avenue • Robert Mugabe Road • Churchill Avenue • ED Mnangagwa (Enterprise) Road • Borrowdale Road • Nemakonde Way (Lomagundi) • Solomon Mujuru Drive (Kirkman) • Bishop Gaul Avenue • Rotten Row • Simon Mazorodze Road • Seke Road • Arcturus Road • Prince Edward Street • Baines Avenue • Central Avenue • Kwame Nkrumah Avenue • Nelson Mandela Avenue.

Summary of Key Differentiators

Capability	Generic Classifieds / Directories	Findit Harare Platform
Price Discovery	Fixed or hidden quotes; high price gouging	InDrive-style real-time USD counter-bidding
Identity & Safety	Unverified numbers on WhatsApp/Facebook	National ID verification, biometric selfie, start PIN
Location Precision	Vague suburb descriptions	Live GPS pin, turn-by-turn voice navigation with street names
Voice Calling	Personal cell numbers exposed to strangers	Encrypted in-app Agora/WebRTC calls with floating PiP
Payment Security	Unregulated prepayments / scam risks	100% direct hand-to-hand cash USD upon completion
Quality Assurance	Zero feedback loops	Verified two-way 5-star ratings, tags & photo catalogue

Conclusion & Status: Findit Harare represents a complete, market-ready digital ecosystem. It is fully implemented, verified across web and Android native environments, and configured for sustainable, high-growth marketplace operations.
